What was the most challenging piece of this assignment? Did you find it easy or challenging to work with HTML and CSS? How long did this overall assignment take you?

The most challenging aspect of this assignment was ensuring that the website was fully responsive across various devices. While I am familiar with HTML and CSS, adapting my designs to fit different screen sizes required careful planning and implementation of media queries. It took me approximately 15 hours to complete the entire assignment, including design, coding, and testing.

What decisions did you make when you made your site mobile-friendly?

To make my site mobile-friendly, I prioritized a fluid layout by using relative units such as percentages and viewport widths for widths instead of fixed pixel values. I also implemented a mobile-first approach by designing the website for smaller screens first, ensuring that all essential content was accessible without excessive scrolling. Additionally, I used larger touch targets for buttons and links to enhance usability on touchscreen devices.

What did you take into account when you developed the design of your website? Is there anything that you're particularly proud of?

When developing the design of my website, I considered factors such as user experience, readability, and visual hierarchy. I aimed for a clean and modern aesthetic by using a simple color palette and plenty of white space. I am particularly proud of how the project showcases my skills and personal brand effectively while remaining visually appealing and easy to navigate.

Given more time or resources, what additional features would you add to your site in the future?

If given more time or resources, I would also like to incorporate animations or transitions to make the user experience more engaging. Additionally, integrating a blog section where I can share insights about my projects or industry trends would be a valuable addition.

How many hours did you spend on this assignment?

I spent approximately 15 hours on this assignment. This included the time spent on research, design, coding, and testing for responsiveness across various devices.

(Optional) If you made any assumptions about this assignment, what are they?

One assumption I made was that the audience for my website would be familiar with basic navigation and web interaction, allowing me to design a straightforward user interface. I also assumed that users would primarily access the site from mobile devices, which guided my focus on mobile-friendly design.

If you used code or design from somewhere online, please mention it here. Furthermore, if you imported a file to use a Fonts or Icons library, please indicate that here as well.

I utilized snippets of code from free CSS templates as inspiration for my layout, ensuring that I customized it to fit my personal style and branding. I also imported the Font Awesome library for icons to enhance the visual appeal of the website.
